

“The investor who permits himself to be stampeded or unduly worried by unjustified market declines in his holdings is perversely transforming his basic advantage into a basic disadvantage.”

-- Benjamin Graham, *The Intelligent Investor*

Should You Invest in Down Markets?

Most seasoned investors know, on an intellectual basis, that they capture what Ben Graham calls a “basic advantage” when they stand pat, and even put new money to work after the market has lost ground. But, the decision to invest — the pledging of hard-earned dollars — does not take place in the mind, but rather, in the gut.

When the market hits a rough patch in response to news about war, recession, home prices or unemployment, many investors are challenged to tune out that nagging little doomsayer ever chanting “it’s different this time.”

Truly, it takes a gutsy investor to shake off worry and stand firmly entrenched in investments when they have lost value; in some cases, a lot of value. In Graham’s view, this is capitalizing on that basic advantage — holding on for the long-term expected returns that we rely on capitalism to deliver.

Capitalism is alive and well. It is not suffering and it is not ill. It is simply doing its job. It is absorbing the decisions of all free market participants as they digest news about local, national and global events that occur on an ongoing basis — every minute of every day. These free markets rise and fall as investors express their confidence in the markets as they are impacted by such events.

Most often, the global markets absorb similar degrees of positive and negative news. As a result, markets are not significantly impacted in the short-term one way or the other, and they continue their slow and relatively steady increase over time. However, once every few years, the markets receive really big news

that sends them much higher or much lower. Lately, credit worries have dominated the news, and the markets have responded negatively, with both the Dow and the S&P having reached the cusp of bear market territory with nearly 20% declines from their highs.

Those investors who panic and sell in such times will likely look back to realize that they permitted themselves to be stampeded, to borrow Graham's phrase. In other words, their guts couldn't take it, and they lost faith in the markets, reacting to the illogical fear that there will be no future good news to move the markets forward.

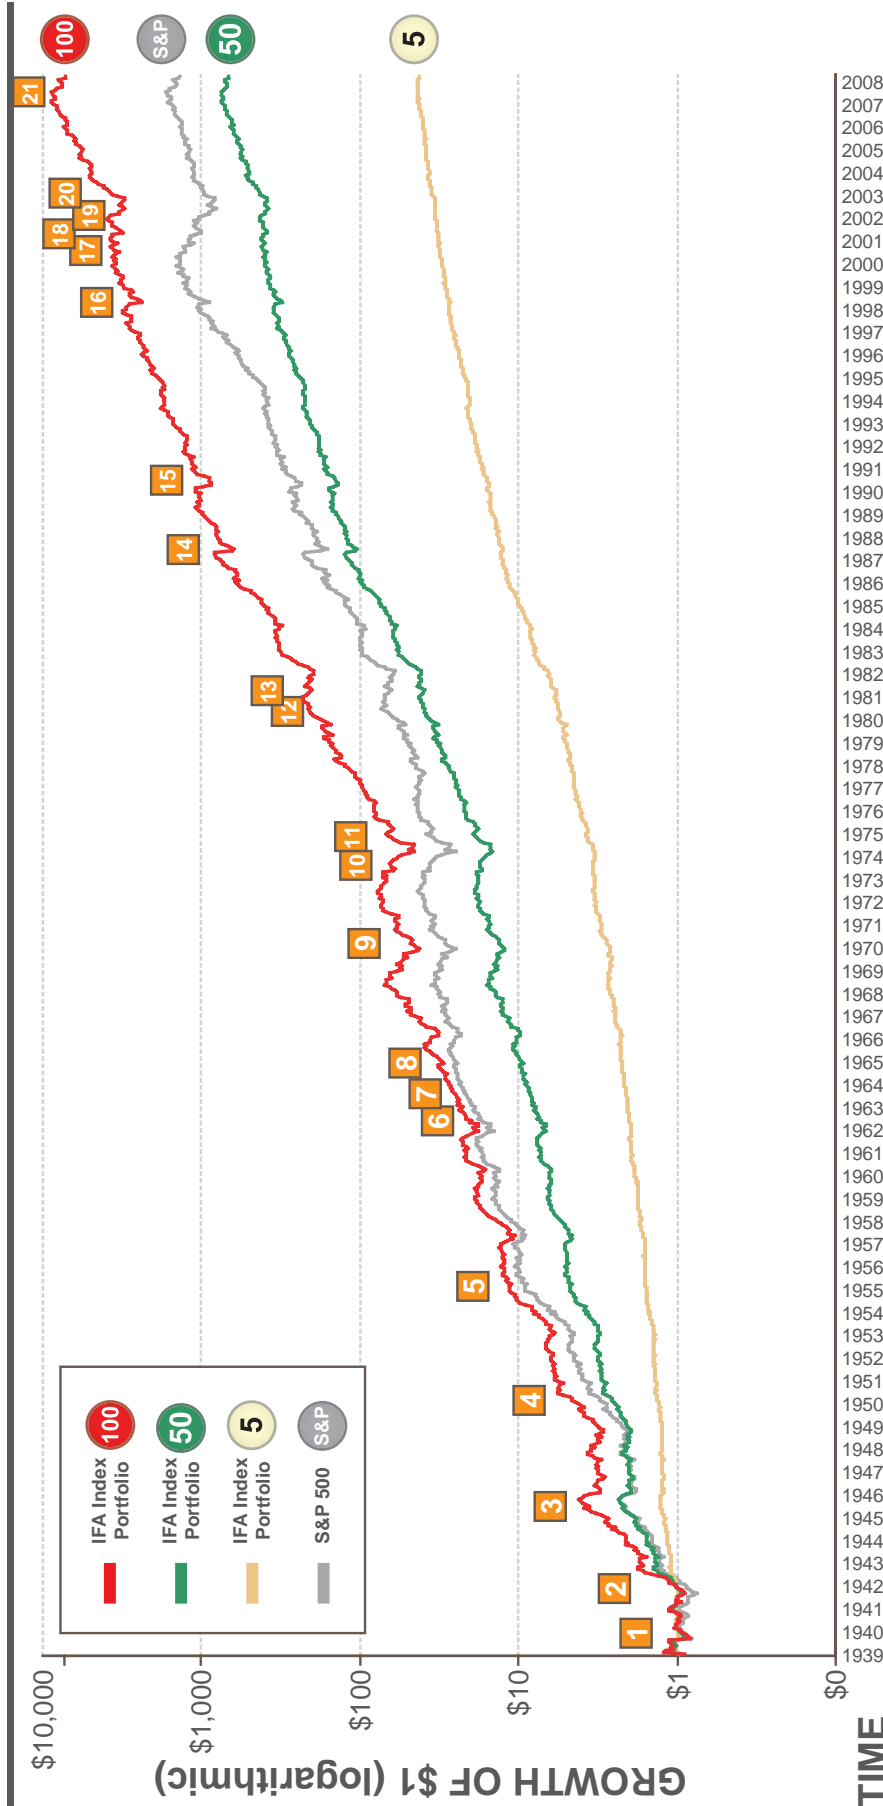

Take a look at the chart on the next page, it shows that over the past 69 years, capitalism has delivered 21 significant market downturns. Certainly, human nature being what it is, the sentiment "it's different this time" was just as difficult to shake off during each of those events as it is right now. But, history shows that those who had the guts to put their faith and trust in long-term capitalism were ultimately rewarded.

From August 1939 through July 2008, the returns of an all-equity, globally diversified Index Portfolio 100 were the most volatile of the Index Portfolios represented. They also earned higher overall returns. Index Portfolios 50 and 5 enjoyed smoother rides, with significant allocations to fixed income dampening both volatility and long-term returns. The lesson here is clear, higher returns come with higher volatility.

Not all portfolios with similar levels of volatility carry the same expected returns, however. If you look at the chart carefully, you will see that IP 100 and the S&P 500 share similar volatility, but the returns of IP 100 are far greater than those of the S&P 500. If risk and return are so carefully intertwined, how can there be such disparity in returns between these two investments? The answer to this question is revealed in an important investing concept brought to light by Eugene Fama and Kenneth French. The two economists determined that substantial, but risk-appropriate allocations to both small and value stocks will increase the expected returns of a portfolio. The S&P 500 does not offer this type of exposure as it invests in just 500 large-cap U.S. companies. An investment in only small and value, however, carries significantly more risk than the S&P 500. IP 100 dampens this risk by investing across 11 asset classes that include investments in about 17,000 companies world-wide. Looking at the chart, you will see that this tilt toward small and value with global asset class diversification has enabled IFA investors to capture substantially higher returns at a similar level of risk. Over the 69-year timeframe, a dollar invested in the S&P 500 grew to about \$1,200 while a dollar invested in IP 100 would have earned nearly \$10,000. Merton Miller was right: "Diversification is your buddy."

BEAR MARKETS, MARKET TURMOIL, AND GROWTH OF \$1

For S&P 500, IFA Index Portfolio 5, IFA Index Portfolio 50, and IFA Index Portfolio 100
69 Years - August 1939 to July 2008

Market Turmoil:

- 1** Investment Act and Investment Advisors Act of 1940 (Jan. 1940)
- 2** Japan Attacks Pearl Harbor (Dec. 1941)
- 3** US drops atomic bomb on Hiroshima (Aug. 1945)
- 4** North Korea Invades South Korea (June 1950)
- 5** President Eisenhower Has Heart Attack (Sept. 1955)
- 6** Cuban Missile Crisis (Oct. 1962)
- 7** President Kennedy Assassinated (Nov. 1963)
- 8** Vietnam Conflict (Feb. 1965)
- 9** Spike in National War Protests (April 1970)
- 10** Oil Embargo (Nov. 1973)
- 11** Nixon Resigns (Aug. 1974)
- 12** Silver Market Collapse, Hunt Bros. (March 1980)
- 13** President Reagan Shot (March 1981)
- 14** Black Monday; Dow Drops 22% (Oct. 1987)
- 15** Iraq Invades Kuwait (Aug. 1990)
- 16** Russian Debt Crisis (Aug. 1998)
- 17** Tech Bubble (Feb. 2001)
- 18** 9/11 Attacks (Sept. 2001)
- 19** WorldCom Bankruptcy Filing (July 2002)
- 20** Operation Iraqi Freedom (March 2003)
- 21** Credit Crunch; Housing Crisis (Nov. 2007)

Sources, Updates, and Disclosures: "Market Downturns - A Historical Perspective," ifabt.com - Created 8-15-08

In light of this important historical data regarding risk, return, time and diversification, your intellectual side is undoubtedly keenly aware of the importance of staying invested and investing, despite market conditions. But, intellect rarely prevails when it conflicts with the gut. So, for just a moment, imagine, if you can, a world without capitalism. Imagine a scenario in which 17,000 publicly-traded businesses around the world cease to profitably deliver the products and services that we all consume and use. Imagine the world's markets failing — and all at once. Finally, imagine what your money would be worth if all of that actually came to pass...

If, like us, you simply cannot imagine the demise of the world's markets, then follow your gut: Buy and hold capitalism, it works.

In tough markets, many investors find it difficult to adhere to an investing discipline, or to maintain a sound perspective that maximizes appropriate exposure to stock market risk to achieve long-term expected returns. Index Funds Advisors can help. Index Funds Advisors provides expertise in measuring and quantifying risk capacity for the long-term investment needs of individuals, 401(k) plans, institutions and corporations. This important measure enables investors to make sound decisions that can help them earn returns commensurate with the risks they take. IFA specializes in the passive rebalancing of risk-appropriate, globally diversified index portfolios that are low cost, tax managed and efficient. To learn how you can Invest and Relax, call 888-643-3133 to speak with an Investment Advisor Representative, or go to ifa.com.

Please see www.ifa.com (under the quote of the week section) for the latest updates, audios, videos, links, and interactive elements.

Is your portfolio properly diversified to match your risk capacity? Find out with a visit to ifa.com. Take the Risk Capacity Survey. You will be matched with an Index Portfolio that's right for you. Or, if you would like to speak with one of IFA's Investment Advisor Representatives to learn how you can improve your diversification for risk-optimized returns, call 718-380-4374.

Index Funds Advisors, Inc. (IFA) is a fee-only Independent Financial Advisor (ifa), registered with the United States Securities and Exchange Commission. IFA incorporated on March 5, 1999 and also is a 50% owner of IFA Canada, Inc.

We match people with portfolios by carefully measuring risk capacity and matching the results to an appropriate risk exposure, in the form of an index portfolio. This process positions our clients for an investment experience that optimizes the trade off between risk and return, based on 80 years of historical index data.

IFA manages brokerage, IRA, 401k, 403b, profit sharing, and all other investment accounts. We also facilitate IRA rollovers from 401ks and 403bs. IFA also provides investment advice to individuals, trusts, corporations, non-profits, and public and private institutions. For institutional accounts, please see our Institutional Division website: ifa-i.com.

IFA assists clients in creating and purchasing diversified portfolios of index funds, primarily from Dimensional Fund Advisors (see DFA Brochure.), Vanguard, Fidelity and Barclays Global Investors (iShares). Dimensional Fund Advisors strives to deliver the performance of capital markets and add value through portfolio design and trading. The firm departs from the rules and rigidity of traditional index funds and avoids the cost-generating activity of stock picking and market timing. Instead DFA focuses on the dimensions of capital markets that reward investors and they deliver them as intelligently and effectively as possible. Their indexes tend to overweight small cap and value stocks, where expected returns are greater. Over 1,000 Investment Advisors rated DFA as the best overall company in the mutual fund business in several surveys. We primarily use their funds to create globally diversified portfolios of index funds. DFA funds are only available to individual investors through DFA approved investment advisors. IFA is approved for the purchase of DFA funds, but receives no compensation from DFA or any other investments. For institutional investors, we design diversified index manager portfolios to minimize vendor concentration risk.

You may select Charles Schwab & Company, Fidelity Investments or TD Ameritrade as the custodian for your account. (see SIPC) If you already have an account with any of these firms, you can easily assign your account to our Master Account to become one of our clients.

We currently have 14 investment advisors; Mark Hebner, Gordon Shuler, Dave Mertz, Brendan Connelly, Denise Delaney, Becky Vasquez, Brad von Grote, David Porter, Dan Solin, Ted Fischer, Ben Brinkerhoff, Matt Cooper, Brent DeVore, and Venkat Yarlagadda. In addition we have 17 other employees and several independent contractors. In total, about 80 people have contributed to the IFA investor education projects of books, websites, brochures, audio recordings, and videos. We hope that we have helped you better understand how markets work.

WARNING: Past performance does not guarantee future results. Investment returns and principal value will fluctuate, so that investors' shares, when sold, may be worth more or less than their original cost. Investing in any mutual fund, index or actively managed, does not guarantee that an investor will make money, avoid losing capital, or indicate that the investment is risk-free. Actively managed funds sometimes outperform index funds. You just don't know in advance which actively managed fund will outperform the appropriate index. Just because a mutual fund is an index mutual fund, it does not guarantee a performance superior to an actively managed mutual fund. When reviewing any backtested performance information, please read the Disclosure for Backtested Performance Information at www.ifabt.com.

SOURCES AND DESCRIPTION OF DATA

The following descriptions of IFA Indexes indicate how indexes are strung together to simulate similar risk and return characteristics back to 1928. This reduces the standard error of the mean which is unacceptably high for periods less than 20 or 30 years. When IFA Indexes are shown in Index Portfolios, all returns data reflects a deduction of 0.9% annual investment advisory fee, which is the maximum Index Funds Advisors (IFA) fee. Fees are based on assets under management at IFA. Unless indicated otherwise, data shown for each individual IFA Index is shown without a deduction of the IFA advisory fee. This method is used because the creation, choice, monitoring and rebalancing of diversified index portfolios are the services of the independent investment advisor. Therefore, fees are deducted from the whole portfolio data.

Live Dimensional Fund Advisors' (DFA) fund data reflects the deduction of mutual fund advisory fees, mutual fund company brokerage fees, other expenses incurred by the mutual funds and incorporates actual trading results. Simulated index data also reflects DFA's current mutual fund expense ratios for the entire period. Both simulated and live data reflect total returns, including dividends, except for IFA/NSDQ.

IFA Indexes Legend

LC - IFA U.S. Large Company Index	RE - IFA Real Estate Securities Index	EM - IFA Emerging Markets Index	2F - IFA 2 Year Global Fixed Income Index

LC IFA U.S. Large Company Index (LC)

January 1928 – Dec 1990: S&P 500 minus 1.25 bp/month

Jan 1991 – Present : DFA US Large Company Symbol: DFLCX

Investment Objective of DFA US Large Company Symbol: DFLCX : The US Large Company Portfolio is a no-load mutual fund designed to approximate the investment performance of the S&P 500 Index, both in terms of the price of the Portfolio's shares and its total investment return. The Portfolio intends to invest in all of the stocks that comprise the S&P 500 Index in approximately the same proportions as they are represented in the Index. The S&P 500 Index is comprised of a broad and diverse group of stocks, most of which are traded on the NYSE. Generally, these are the US stocks with the largest market capitalizations and, as a group, they represent approximately 70% of the total market capitalization of all publicly traded US stocks.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Number of Holdings	Price/Earnings (excludes negatives)
US Large Company Portfolio	-36.78%	-8.29%	-2.19%	-1.47%	499	10.20
S&P 500 Index	-37.00%	-8.36%	-2.19%	-1.38%	Weighted Average Market Cap \$78,440M	Dividend Yield 2.99%
					Weighted Average Book-to-Market 0.65	Expense Ratio (as of 11/30/07) 0.15%

*All Data as of Dec 31, 2008, unless otherwise indicated.

LV IFA U.S. Large Cap Value Index (LV)

January 1928 – February 1993: Dimensional Large Value Index minus 2.25 bp/month

March 1993 – Present: DFA US Large Cap Value Symbol: DFLVX

Investment Objective of DFA US Large Cap Value Symbol: DFLVX : The US Large Cap Value Portfolio is a no-load mutual fund designed to capture the returns and diversification benefits of a broad cross-section of US value companies, on a market-cap weighted basis. The Portfolio invests in securities of US companies with market capitalizations within the largest 90% of the market universe or larger than the 1,000th largest US company, whichever results in a higher market capitalization break. The market universe is comprised of companies listed on the New York Stock Exchange, American Stock Exchange, and NASDAQ National Market System. After identifying the aggregate market capitalization break, a value screen is applied to the universe. Securities are considered value stocks primarily because a company's shares have a high book value in relation to their market value (BtM). This BtM sort excludes firms with negative or zero book values. In assessing value, additional factors such as price to cash flow or price to earnings ratios may be considered, as well as economic conditions and developments in the issuer's industry. The criteria for assessing value are subject to change from time to time.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Number of Holdings	Price/Earnings (excludes negatives)
US Large Cap Value Index Portfolio (I)	-40.80%	-11.56%	-2.05%	2.15%	208	8.36
Russell 1000 Value Index	-36.85%	-8.32%	-0.80%	1.36%	Weighted Average Market Cap \$34,809M	Dividend Yield 3.09%
					Weighted Average Book-to-Market 1.27	Expense Ratio (as of 11/30/07) 0.38%

*All Data as of Dec 31, 2008, unless otherwise indicated.

SC IFA U.S. Small Cap Index (SC)

January 1928 – March 1992: Dimensional Small Cap Index minus 3.17 bp/month

April 1992 – Present : DFA US Small Cap Symbol: DFSTX

Investment Objective of DFA US Small Cap Symbol: DFSTX : The US Small Cap Portfolio is a no-load mutual fund designed to capture the returns and diversification benefits of a broad cross-section of US small companies, on a market-cap weighted basis. The Portfolio invests in securities of US companies with market capitalizations within the smallest 10% of the market universe or smaller than the 1,000th largest US company, whichever results in a higher market capitalization break. The market universe is comprised of companies listed on the New York Stock Exchange, American Stock Exchange, and NASDAQ National Market System.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Number of Holdings	Price/Earnings (excludes negatives)
US Small Cap Index Portfolio (I)	-36.01%	-10.23%	-1.99%	4.84%	2,617	11.13
Russell 2000 Index	-33.79%	-8.23%	-0.93%	3.05%	Weighted Average Market Cap \$729M	Dividend Yield 1.40%
					Weighted Average Book-to-Market 1.09	Expense Ratio (as of 11/30/07) 0.38%

*All Data as of Dec 31, 2008, unless otherwise indicated.

SOURCES AND DESCRIPTION OF DATA

SV IFA U.S. Small Cap Value Index (SV)

January 1928 – February 2000: Dimensional Targeted Value Index minus 3.42 bp/month

March 2000 – Present: DFA US Targeted Value Symbol: DFFVX

Investment Objective of DFA US Targeted Value Symbol: DFFVX : The US Targeted Value Portfolio is a no-load mutual fund designed to capture the returns and diversification benefits of a broad cross-section of US small value companies, on a market cap-weighted basis. The Portfolio invests in securities of US companies whose size (market capitalization) falls in the smallest 18% of the market universe. The market universe is comprised of companies listed on the New York Stock Exchange, American Stock Exchange, and NASDAQ National Market System. After identifying the smallest 18% of aggregate market capitalization, a value screen is applied to the universe. Securities are considered value stocks primarily because a company's shares have a high book value in relation to their market value (BtM). This BtM sort excludes firms with negative or zero book values. In assessing value, additional factors such as price to cash flow or price to earning ratios may be considered, as well as economic conditions and developments in the issuer's industry. The criteria for assessing value are subject to change from time to time.

Average Annual Total Returns	One Year	Three Years	Five Years	Inception	Number of Holdings	1,506	Price/Earnings (excludes negatives)	9.42
US Targeted Value Portfolio (I)	-33.78%	-10.05%	-0.18%	8.22%	Weighted Average Market Cap	\$1,152M	Dividend Yield	1.86%
Russell 2000 Value Index	-28.92%	-7.49%	0.27%	7.15%	Weighted Average Book-to-Market	1.37	Expense Ratio (as of 11/30/07)	0.41%

RE IFA Real Estate Index (RE)

January 1928 – December 1974: 50% IFA US SC Index and 50% IFA SV Index
January 1993 – June 2008: DFA Real Estate Securities Symbol: DFREX

Jan 1975 – Dec 1992: Don Keim Equity REIT Index minus 2.75 bp/month
July 2008 – Present: DFA Global Real Estate Securities Symbol: DGREX

Investment Objective of DFA Global Real Estate Securities Symbol: DGREX : The Global Real Estate Securities Portfolio is a no-load mutual fund designed to achieve long-term capital appreciation. The Portfolio invests in a broad range of securities of US and non-US companies in the real estate industry, including companies in developed and emerging markets, with a focus on real estate investment trusts or companies that Dimensional considers to be REIT-like entities. The Portfolio primarily purchases shares of Dimensional's Real Estate Securities Portfolio and International Real Estate Securities Portfolio. In addition to investing in these underlying funds, the Portfolio also may invest directly in securities of companies in the real estate industry. The Portfolio is currently authorized to invest in companies in the following countries: Australia, Belgium, Canada, China, France, Germany, Greece, Hong Kong, Japan, the Netherlands, New Zealand, Singapore, South Africa, Taiwan, the United Kingdom, and the United States. Other countries may be authorized for investment in the future.

Average Annual Total Returns	Inception (6/4/2008)	Number of Holdings	285	Price/Earnings (excludes negatives)	13.61

January 1970 – December 1988: IFA Emerging Markets Index
April 1998 – Present: DFA Emerging Markets Value Portfolio Symbol DFEVX

Investment Objective of DFA Emerging Markets Value Portfolio Symbol DFEVX : The Emerging Markets Value Portfolio is a no-load mutual fund designed to achieve long-term capital appreciation. The Portfolio pursues its objective by investing in emerging markets equity securities that Dimensional deems to be value stocks at the time of purchase. Dimensional will consider, among other things, information disseminated by the International Finance Corporation in determining and approving countries that have emerging markets. Securities are considered value stocks primarily because a company's shares have a high book value in relation to their market value (B/M). This B/M sort excludes firms with negative or zero book values. In assessing value, additional factors such as price to cash flow or price to earning ratios may be considered, as well as economic conditions and developments in the issuer's industry. The criteria for assessing value are subject to change from time to time. The Portfolio currently invests in companies in Brazil, Chile, China, the Czech Republic, Hungary, India, Indonesia, Israel, Malaysia, Mexico, Philippines, Poland, South Africa, South Korea, Taiwan, Thailand, and Turkey. Due to repatriation restrictions, the Portfolio currently holds but does not purchase securities in Argentina.

1F IFA One-Year Fixed Income Index (1F)

January 1928 – June 1963: One-Month T-Bills minus 1.5 bp/month
August 1983 – Present: DFA One-Year Fixed Income Symbol DFIHX

July 1963 – July 1983: One-Year T-Note Index minus 1.5 bp/month

Investment Objective of DFA One-Year Fixed Income Symbol DFIHX : The investment objective of the DFA One-Year Fixed Income Portfolio is to achieve stable real returns in excess of the rate of inflation with a minimum of risk. Generally, the Portfolio will acquire high quality obligations which mature within one year from the date of settlement. However, when greater returns are available, substantial investments may be made in securities maturing within two years from the date of settlement as well. In addition, the Portfolio intends to concentrate investments in the banking industry under certain circumstances. The Portfolio is diversified, and with respect to corporate debt obligations and commercial paper, the Portfolio generally invests in securities rated A1/P1 or better.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Duration	0.77 Years
One-Year Fixed Income Index Portfolio	4.02%	4.66%	3.42%	3.96%	Average Portfolio Maturity Range	0.77 Years
Merrill Lynch 6-Month US Treasury Bill Index	3.58%	4.66%	3.65%	3.80%	Expense Ratio (as of 11/30/07)	0.18%
Merrill Lynch 1-Year US Treasury Note Index	4.75%	5.00%	3.62%	4.15%		

*All Data as of Dec 31, 2008, unless otherwise indicated.

2F IFA 2-Year Global Fixed Income Index (2F)

January 1928 – June 1977: Five-Year T-Notes minus 1.5 bp/month
January 1990 – February 1996: Citi World Government Bond 1-3 Years Hedged minus 1.5 bp/month

July 1977 – December 1989: ML US Treasury Index 1-3 Years minus 1.5 bp/month
March 1996 – December 2007: DFA Two-Year Global Fixed Income Symbol: DFGFX

Investment Objective of DFA Two-Year Global Fixed Income Symbol: DFGFX : The investment objective of the DFA Two-Year Global Fixed Income Portfolio is to maximize total returns consistent with preservation of capital. Generally, the Portfolio will acquire high quality obligations which mature within two years from the date of settlement. The Portfolio expects to invest in obligations issued or guaranteed by countries that are members of the Organization of Economic Cooperation and Development, but may invest in other countries as well. Investments in corporate debt obligations, bank obligations, commercial paper, repurchase agreements, and obligations of other domestic and foreign issuers with high quality ratings may also be included. The Portfolio will also enter into forward foreign currency contracts solely for the purpose of hedging against fluctuations in currency exchange rates. The Portfolio is diversified; and with respect to corporate debt obligations and commercial paper, the Portfolio generally invests in US securities rated A1/P1 or better and non-US securities rated AA/Aa2 or better.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Duration	0.82 Years
Two-Year Global Fixed Portfolio (I)	4.08%	4.60%	3.28%	4.06%	Average Portfolio Maturity Range	0.83 Years
Citigroup World Government Bond Index 1-3 Years	5.56%	5.31%	4.15%	4.48%	Expense Ratio (as of 11/30/07)	0.18%

*All Data as of Dec 31, 2008, unless otherwise indicated.

5G IFA 5-Yr Government Fixed Income Index (5F)

January 1928 – December 1972: Five-Year T-Notes minus 1.92 bp/month
June 1987 – Present: DFA Five-Year Gov't Income Symbol: DFFGX

January 1973 – May 1987: Barclays Intermediate Government Bond Index minus 1.92 bp/month

Investment Objective of DFA Five-Year Gov't Income Symbol: DFFGX : The investment objective of the DFA Five-Year Government Portfolio is to maximize total returns available from the universe of debt obligations of the US government and US government agencies. Ordinarily, the Portfolio will invest at least 80% of its assets in US government obligations and US government agency obligations that mature within five years from the date of settlement. The Portfolio may also acquire repurchase agreements.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Duration	3.34 Years
Five-Year Gov't Portfolio	8.36%	5.93%	4.24%	5.29%	Average Portfolio Maturity Range	3.58 Years
Merrill Lynch US Treasury/Agency Index 1-5 Years	8.37%	6.75%	4.60%	5.21%	Expense Ratio (as of 11/30/07)	0.23%

*All Data as of Dec 31, 2008, unless otherwise indicated.

5F IFA 5-Yr Global Fixed Income Index (5F)

January 1928 – December 1984: IFA Five-Year Government Fixed Income Index
December 1990 – Present: DFA Five-Year Global Fixed Income Symbol: DFGBX

January 1985 – November 1990: Citi Global Government Bond Hedged minus 2.33 bp/month

Investment Objective of DFA Five-Year Global Fixed Income Symbol: DFGBX : The investment objective of the DFA Five-Year Global Fixed Income Portfolio is to provide a market rate of return for a fixed income portfolio with low relative volatility of returns. Generally, the Portfolio will invest in high quality obligations which mature within five years from the date of settlement. The Portfolio expects to invest primarily in obligations issued or guaranteed by any of the following countries (but may invest in other countries as well): Australia, Canada, Denmark, EMU countries, Japan, Sweden, Switzerland, the United Kingdom, and the United States. Investments in obligations of other foreign issuers rated AA or better, corporate debt obligations, bank obligations and commercial paper may also be included. The Portfolio will also enter into forward foreign currency contracts solely for the purpose of hedging against fluctuations in currency exchange rates.

Average Annual Total Returns	One Year	Three Years	Five Years	Ten Years	Duration	2.34 Years
Five-Year Global Fixed Portfolio	4.02%	4.38%	3.54%	4.71%	Average Portfolio Maturity Range	2.51 Years
Citigroup World Government Bond Index 1-5 Years	6.60%	5.66%	4.53%	4.79%	Expense Ratio (as of 11/30/07)	0.28%

*All Data as of Dec 31, 2008, unless otherwise indicated.

DISCLOSURE FOR BACKTESTED PERFORMANCE DATA

Disclosure for Backtested Performance Information on the Simulated Strategies of IFA Indexes and IFA Index Portfolios (Indexfolios):

1. Index Funds Advisors, Inc. (IFA) was incorporated in March 1999 and placed its first independent client investments in early 2000. The performance information presented in the chart or table represents backtested performance based on combined simulated index data and live (or actual) mutual fund results from Jan 1, 1928 to period ending date shown using the strategy of buying, holding and annually rebalancing globally diversified portfolios of index funds. **Backtested performance is hypothetical (it does not reflect trading in actual accounts) and is provided for informational purposes to indicate historical performance had the index portfolios been available over the relevant period. IFA did not offer the index portfolios until November 1999.** Prior to 1999, IFA did not manage client assets. The IFA indexing investment strategy is based on the principles of Modern Portfolio Theory and the Fama and French Three Factor Model for Equities and Two Factor Model for Fixed Income. Index portfolios are designed to provide substantial global diversification (approximately 15,000 companies in 40 countries) in order to reduce investment concentration and the resulting increased risk caused by the volatility of individual companies, indexes, or asset classes. Client portfolios are monitored and rebalanced, taking into consideration risk exposure consistency, transaction costs, and tax ramifications to maintain target asset allocations as shown in the twenty index portfolios.

2. A review of the IFA Index Data Sources and IFA Indexes Time Series Construction is an integral part of and should be read in conjunction with this explanation of backtested performance information. For detailed descriptions and definitions of the underlying criteria and data used to construct backtested performance, see these two links: Data Sources and IFA Indexes Time Series Construction. Simulated index data is based on the performance of indexes as described in the Data Sources page. The index mutual funds used in IFA's twenty index portfolios are IFA's best estimate of a mutual fund that will come closest to the index data provided in the simulated indexes. Simulated index data is used for the period prior to the inception of the relevant live mutual fund data an equivalent mutual fund expense ratio is deducted from both live and simulated data. Live (or actual) mutual fund performance is used after the inception of each mutual fund. The IFA Indexes Times Series Construction goes back to Jan. 1928 and consistently reflects a tilt towards small and value equities over time, with an increasing diversification to international markets and the real estate index as data became available. In Jan. 1928, there are 4 equities indexes and 2 bond indexes, in Jan. 1970 there are a total of 8 indexes, and there are 15 indexes in March 1998 to present. If the original 4 equity indexes from 1928 are held constant until Dec. 2007, the annualized rate of return is 10.88%, after the deduction of a 0.9% IFA advisor fee and a standard deviation of 22.61%. The evolving IFA Indexes over the same period have a 11.14% annualized return after the same IFA fees and a 21.75% standard deviation. It is IFA's advice that the value of having a longer time series exceeds the concerns of index substitutions over the 1928 to present period. Due to the very high standard deviations of returns (22%) a 60 year or more sample size of data is recommended to reduce the standard error of the mean. In other words, in IFA's opinion, smaller sample sizes introduce larger errors than the errors introduced by stitching together indexes over time. This is the advice IFA provides to its clients. Check website to see the analysis of the evolution of these portfolios. Backtested performance is calculated by using a computer program and monthly returns data set that starts with the first day of the given time period and evaluates the returns of simulated indexes and index mutual funds, see Data Sources. In 1999, tax-managed funds became available for many different index funds. IFA uses tax-managed funds in taxable accounts. The tax-managed funds are consistent with the indexing strategy, however, they should not be expected to track the performance of corresponding non-tax-managed funds in the same or similar indexes. As such, the performance of portfolios using tax-managed funds will vary from portfolios that do not utilize these funds.

3. **Backtested performance does not represent actual performance and should not be interpreted as an indication of such performance. Actual performance for client accounts may be materially lower than that of the index portfolios.** Backtested performance results have certain inherent limitations. Such results do not represent the impact that material economic and market factors might have on an investment adviser's decision-making process if the adviser were actually managing client money. Backtested performance also differs from actual performance because it is achieved through the retroactive application of model portfolios (in this case, IFA's twenty index portfolios) designed with the benefit of hindsight. As a result, the models theoretically may be changed from time to time to obtain more favorable performance results.

4. History of Changes to the IFA Indexes:

1. **1991-1999:** Index portfolios 10, 30, 50, 70 and 90 were originally suggested by Dimensional Fund Advisors (DFA), merely as an example of globally diversified investments using their many custom index mutual funds, back in 1991 with moderate modifications in 1996 to reflect the availability of index funds that tracked the emerging markets asset class. Portfolios between each of the above listed portfolios were created by IFA in 1999 by interpolating between the above portfolios. Portfolios 5, 95 and 100 were created by Index Funds Advisors in 1999, as a lower and higher extension of the DFA 1991 risk and return line. See History of Changes to the IFA Indexes and Portfolios at <http://www.ifa.com/btp/historyofchange.html>

5. Backtested performance results assume the reinvestment of dividends and capital gains and annual rebalancing. The performance of the strategy reflects and is net of the effect of IFA's annual investment management fee of 0.9%, billed monthly. Monthly fee deduction is a requirement of our software used for backtesting. Actual IFA advisory fees are deducted quarterly, in advance. This fee is the highest fee IFA has ever charged. Depending on the size of your assets under management, your investment management fee may be less. Backtested risk and return data is a combination of live (or actual) mutual fund results and simulated index data, and mutual fund fees and expenses have been deducted from both the live (or actual) results and the simulated index data. Although index mutual funds minimize tax liabilities from short and long term capital gains, any resulting tax liability is not deducted from performance results. Performance results also do not reflect transaction fees (as seen here) and other expenses charged by broker-dealers, which reduce returns. IFA is not paid any brokerage commissions, sales loads, 12b1 fees, or any form of compensation from any mutual fund company or broker dealer. The only source of compensation from client investments is obtained from asset based advisory fees paid by the client. More information about advisory fees, expenses, no-load mutual fund fees, prospectuses for no-load index mutual funds, brokerage and custodian fees can be found on the Fee link in the gold navigation bar below and on every page at www.ifa.com.

6. For all data periods, annualized standard deviation is presented as an approximation by multiplying the monthly standard deviation number by the square root of twelve. Please note that the number computed from annual data may differ materially from this estimate. We have chosen this methodology because Morningstar uses the same method. (see IFA Indexes Time Series Construction)

7. Not all of IFA clients follow our recommendations and depending on unique and changing client and market situations we may customize the construction and implementation of the index portfolios for particular clients, including the use of tax-managed mutual funds, tax-loss-harvesting techniques and rebalancing frequency and precision. In taxable accounts, IFA uses tax-managed index funds to manage client assets. However, the tax-managed index funds are not used in calculating the backtested performance of the index portfolios, unless specified in the table or chart. Some clients substitute the mutual funds recommended by IFA with investment options available through their 401k or other accounts, thereby creating a custom asset allocation. The performance of custom asset allocations may differ materially from (and may be lower than) that of the index portfolios.

8. Performance results for clients that invested in accordance with the Index Portfolios will vary from the backtested performance provided on the site due to market conditions and other factors, including investments cash flows, mutual fund allocations, frequency and precision of rebalancing, tax-management strategies, cash balances, lower than 0.9% advisory fees, varying custodian fees, and/or the timing of fee deductions. As the result of these and potentially other variances, our clients have not and are not expected to have achieved the exact results shown since November 1999, when we placed our first investment. Actual performance for client accounts may differ materially from (and may be lower than) that of the index portfolios. Clients should consult their account statements for information about how their actual performance compares to that of the index portfolios.

9. **As with any investment strategy, there is potential for profit as well as the possibility of loss.** IFA does not guarantee any minimum level of investment performance or the success of any index portfolio or investment strategy. All investments involve risk (the amount of which may vary significantly) and investment recommendations will not always be profitable.

10. Past performance does not guarantee future results.

11. IFA Indexes and Index Portfolios (Indexfolios) Value Data are based on a starting value of one, as of Jan 1, 1928. Sources and Disclosures: As stated above, dfa.com, and yahoo.com

12. **DISCLAIMER: THERE ARE NO WARRANTIES, EXPRESSED OR IMPLIED, AS TO ACCURACY, COMPLETENESS, OR RESULTS OBTAINED FROM ANY INFORMATION PROVIDED HEREIN OR ON THE MATERIAL PROVIDED.** The information contained herein has been obtained from sources believed to be reliable, but the accuracy of the information cannot be guaranteed.
